

# Portable, Inexpensive and Flexible Interactivity is here.

Interactive Whiteboard technology continues to evolve. Today many teachers and trainers are abandoning wall mounted Interactive Whiteboards for portable, hand held devices that combine the features of IWBs with the flexibility of a portable system. Portable systems can be used wherever there is a data projector - they can be used on existing whiteboards, walls and large projection surfaces.

## Portable Interactive Whiteboard and Wireless Tablet

The difference between a good presentation and an unforgettable presentation is audience participation. Our new Portable Interactive Whiteboard (PIW) and Wireless Tablet gives you total control of your computer from up to 10 m. You can now control your presentation, or lesson from anywhere in the room. And with multiple pairing of up to fifty devices to one receiver you can actively encourage audience/student participation.
